

Online Appendix for “Why Nuclear Energy Programs Rarely Lead to Proliferation,”
International Security, Fall 2017.

Figure A1: Status of Nuclear Energy Programs for Proliferators

Note: this figure illustrates the status of nuclear energy programs for countries pursuing nuclear weapons (prior to acquisition). To capture the beginning of operation for Iran’s Bushehr reactor, I extend the figure beyond 2009, assuming that Iran and Syria’s nuclear weapons programs extended until 2015.

Table A1: Proliferation and Energy Program Dates for Nuclear Pursuers, 1954-

Country	Explore	Pursue	Acquire	1st Power Reactor Construction	1st Power Reactor Operation
France	1946-1953	1954-1959	1960	1955	1959
China		1955-1963	1964	1987	1994
Israel	1949-1957	1958-1968	1969		
Australia	1956-1960	1961-1973			
India	1954-1963	1964-1987	1988	1964	1969
Egypt	1960-1964	1965-1974			
Taiwan	1987-1988	1967-1977		1972	1978
South Korea	1959-1969	1970-1978		1972	1978
Libya		1970-2003			
Pakistan		1972-1986	1987	1966	1972
South Africa	1969-1973	1974-1978	1979-1991	1976	1984
Argentina	1968-1977	1978-1990		1968	1974
Brazil	1953-1977	1978-1990		1971	1985
North Korea	1965-1979	1980-2005	2006	2002	
Iraq	1976-1981	1982-1995			
Iran	1976-1984	1985-		1975	2013
Syria		2000-			

Explore, pursue, and acquire dates are from Way in appendix in Way and Weeks (2014).

Power reactor dates are from the World Nuclear Association.

Table A17: Nuclear Energy Programs and Acquisition, 1954-Present, Bleek (2010) Codings

	Did Not Acquire	Acquired	% Acquired
No Energy Program	Libya, Iraq	China, Israel, North Korea	3/5 (60%)
Energy Program	Brazil, Iran, South Korea, Yugoslavia	France, India, Pakistan, South Africa	4/8 (50%)

Table A18: Nuclear Energy Programs and Acquisition, 1954-Present, Jo and Gartzke Codings

	Did Not Acquire	Acquired	% Acquired
No Energy Program	Iraq	China, Israel, North Korea	3/4 (75%)
Energy Program	Argentina, Brazil, Iran, Romania, South Korea, Sweden, Taiwan, Yugoslavia,	France, India, Pakistan, South Africa	4/12 (33%)

Figure A2: Energy Programs and the Frequency of Underestimates

Table A19: Nuclear Energy Programs and the Likelihood of Underestimating Nuclear Programs

	Power Reactor Operating or Under Construction	Operating Power Reactor	Number of Operating Power Reactors
Base Model (n=60)	-1.81 (0.69)***	-1.64 (1.18)	-1.57 (1.18)
+ Controls (n=60)	-2.89 (0.97)***	-0.73 (1.56)	-0.76 (1.35)

* p<.10 ** p<.05 *** p<.01

Each cell shows the results of a different logit model. Cell entries are logit coefficients for the measures of nuclear energy programs, with clustered standard errors in parentheses. Controls include the year of the assessment and separate dummy variables for whether the proliferator is a US ally or US adversary.

Figure A3: Energy Programs and the Frequency of Correct Estimates

Figure A4: Energy Programs and the Frequency of Overestimates

Table A20: Nuclear Energy Programs and U.S. Intelligence Estimates, Multinomial Logit Models

	Power Reactor Operating or Under Construction	Operating Power Reactor	Number of Operating Power Reactors
Underestimate (n=60)	-1.58 (1.01)	-1.39 (1.48)	-1.42 (1.32)
Overestimate (n=60)	2.24 (0.88)**	-1.61 (0.94)*	-1.62 (0.87)*

* p<.10 ** p<.05 *** p<.01

Each column shows the results of a different multinomial logit model where an accurate assessment is the base category. Cell entries are multinomial logit coefficients for the measures of nuclear energy programs, with clustered standard errors in parentheses. All models control for the year of the assessment and separate dummy variables for whether the proliferator is a US ally or US adversary.

Figure A5: Energy Programs and the Frequency of US Nonproliferation Sanctions

Table A21: Nuclear Energy Programs and Likelihood of U.S. Sanctions Imposition, 1945-2000

	Power Reactor Operating or Under Construction	Operating Power Reactor	Number of Operating Power Reactors
t , t^2 , and t^3 (n=231)	1.35 (0.63)**	0.70 (0.53)	0.23 (0.13)*
+ Controls (n=231)	1.31 (0.45)***	0.56 (0.53)	-0.07 (0.28)

* p<.10 ** p<.05 *** p<.01

Each cell shows the result of a different logit model. Cell entries are logit coefficients for the measures of nuclear energy programs, with clustered standard errors in parentheses. Controls include a dummy variable for the post-1976 era and separate dummy variables for whether the proliferator is a US ally or US adversary.
